

LED UV-C

DISINFECTION BY Grote

GROTE INTRODUCES UV-C LED LIGHTING

The HVAC systems on most mass transit vehicles are dark, damp spaces equipped with no disinfection capability beyond simple filtration. In this environment, bacteria and viruses can gather and grow, slipping past filters to circulate widely throughout a vehicle's passenger cabin. Grote's UV-C disinfecting light assembly installs quickly and easily into your ventilation system's evaporator compartment, functioning safely during normal operations while effectively destroying microorganisms as they pass through the evaporator.

Enjoy cleaner air, a more efficient HVAC system, and greater peace of mind for passengers and staff with Grote's UV-C technology.

Grote's UV-C technology is perfect for virtually any type of public transport, from buses and trains to shuttles and metro lines.

*All references to "disinfection" are referring generally to the reduction of pathogenic bioburden and are not intended to refer to any specific definition of the term as may be used for other purposes by the U.S. Environmental Protection Agency. The disinfection technology as incorporated in Grote products is not for use as, or for, medical devices.
